In December 2018, the Ontario Task Force on Environmental Health Submitted a report to Ontario's Minister of Health outlining how health services for ME, FM and MCS could be improved. In January 2020, the report was given to the government agency Public Health Ontario to implement. Then work got delayed by the pandemic. PHO has just announced the hiring of a consultant to restart this work.

The Ontario association - MEAO.- did a good job of summarizing the situation and we thank MEAO for permission to repost their [newsletter](#) .
